

Make your own microphone!

1. Poke a flower stick into a polystyrene ball to make it easier to work with.

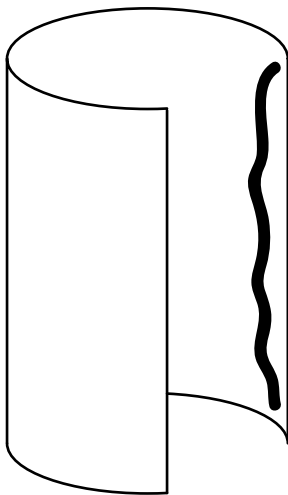

2. Brush decoupage varnish on the entire polystyrene ball.

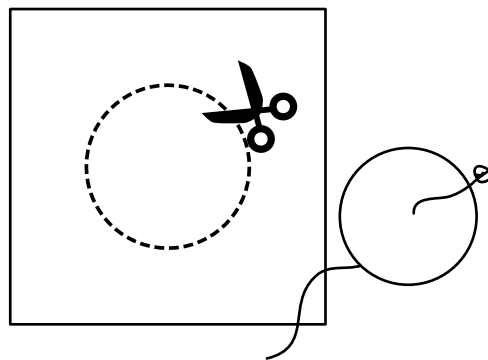

3. Sprinkle the polystyrene ball with glitter.

4. Let dry standing in a little oasis or something similar.

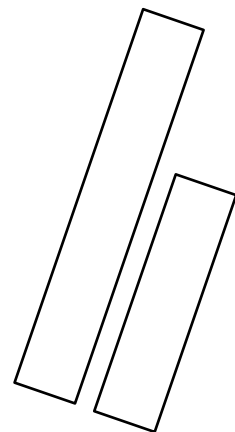

5. Shape a sturdy piece of cardboard into a microphone. Glue on.

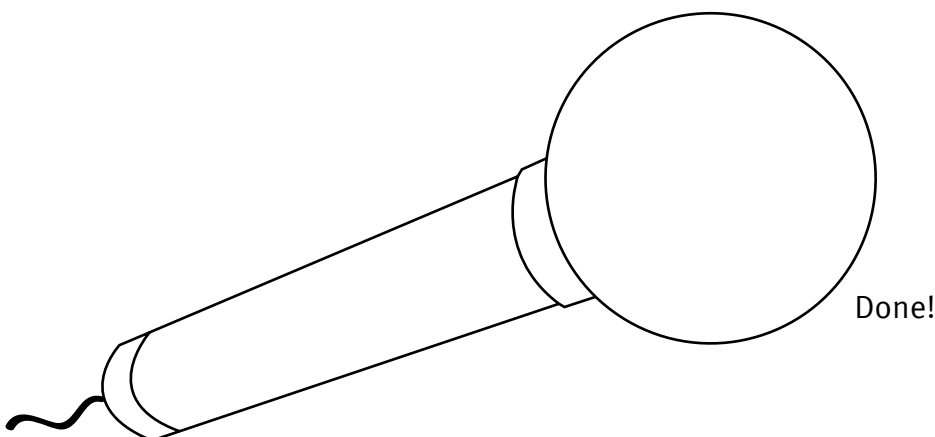

6. Cut out a circle to fit the bottom of the microphone.

7. Make a hole in the middle and insert a piece of string. Tie a knot on one side so the string does not slide around and glue the bottom of the microphone.

8. Cut strips of glittery craft rubber to whatever size you like, and that fits around the top and bottom of the microphone. Glue on.

Done!
